

## MICROSOFT SHAREPOINT TECHNOLOGY — POWER, FLEXIBILITY, HIGH PERFORMANCE

Built on Microsoft SharePoint® technology, the ActiveCampus Portal provides a secure foundation for constructing a smart workplace and learning environment. Utilizing industry-standard technology, SharePoint delivers a standard framework in which applications can be written, and provides an open architecture platform that supports Datatel's commitment to flexibility and integration. SharePoint gives users the freedom to implement 3rd party applications right out of the box, and to easily migrate to new technologies as needed in the future. They enjoy maximum performance, strong security features, and stability for years to come.

*"The Datatel ActiveCampus Portal has greatly improved communications at Simpson College, and made it much easier for everyone on campus to more effectively interact and collaborate."*

*Kelley Bradder  
CIO and Vice President of Information Services  
Simpson College*

## INSTITUTIONAL BRANDING

In addition to providing a unified application for all services across campus, Datatel's next generation portal provides a powerful tool for branding your institution. The ActiveCampus Portal is fully customizable, so your college can showcase its identity at every departmental level. You have the ability to create a unique online identity, while reinforcing a culture consistent with your institution's overall values and mission.

## DATATEL PROFESSIONAL SERVICES FOR MAXIMUM ROI

With nearly 30 years of experience serving colleges and universities, Datatel offers the most experienced team of technology services professionals in the industry. Clients enjoy the peace of mind that comes with working with professionals committed to ensuring their ActiveCampus Portal solution performs exactly as it should.

***Welcome to a New World of Collaboration  
and Social Networking in Higher Education***

The ActiveCampus Portal provides a gateway to all resources a user might need.

Users share a common environment where they can effectively collaborate.

## COLLABORATION — THE KEY TO SUCCESS

In higher education, individuals, departments, and institutions must cooperate efficiently in order to succeed. But, while the need to productively interact becomes increasingly important, colleges and universities are hampered by ever-more complex systems, applications, and processes. Users have countless login

names and passwords to manage, constituents must navigate multiple Web sites and resources across campus, and diverse groups in different locations face challenges every time they must come together.

The solution is Datatel's ActiveCampus™ Portal — a powerful enterprise work environment and collaboration system that seamlessly brings together people, systems, and information. Developed exclusively for higher education, Datatel's leading-edge portal enables institutions to bridge everyday challenges, improve user productivity, and transform relationships among people at every level.

### ROLE-BASED PERSONAS

The ActiveCampus Portal incorporates personas for dozens of roles across the institutional environment, each delivering a customized point of entry designed to enhance the user's experience.

Examples of ActiveCampus Portal personas include:

- Student
- Financial Management
- Institutional Research
- Information Technology
- Enrollment Management
- HR
- Financial Aid
- Alumni
- Leadership
- And many more

### BUILD STRONGER RELATIONSHIPS

The ActiveCampus Portal provides a single point of access for everyone across the institution. Users benefit from a common environment within which they can cooperate and collaborate more freely and effectively. Institutions realize greater efficiency and improved teamwork, and achieve job satisfaction gains previously unimaginable.

By bridging the gap between diverse and distributed groups, the ActiveCampus Portal makes it possible for constituents to work together better than ever before — forming beneficial relationships that last a lifetime. Administrative offices on separate campuses can operate cohesively, students can establish ad hoc groups, and faculty members can collaborate with administrative staff, colleagues, and peers. Groups succeed together as tight communities with a common purpose.

### EASY ACCESS TO INFORMATION

The ActiveCampus Portal provides a gateway to all resources a user might need, free from the hurdles traditionally associated with multi-layered and diverse campus environments. Users have fingertip access to critical data, whenever they need it — so they can take advantage of convenient self-service opportunities, or provide greater support to others.

The ActiveCampus Portal provides extremely tight integration to every function within the Datatel® Colleague® enterprise resource planning (ERP) system, as well as single sign-on access to 3rd party applications and reporting tools. There is no need to launch individual programs, or search for the location of specific data. Instead of spending time jumping between multiple systems, databases, and screens, users spend more time collaborating and making better use of their time and resources — meaning fewer unproductive meetings, fewer confusing e-mails, and lower administrative expenses.
